## PROFESSIONAL SUMMARY

Experienced Software Engineer with 3+ years in designing, architecting, and implementing large-scale cloud-native AI systems. Proven expertise in improving software development lifecycle, from technical design reviews to robust testing and MLOps strategies.

## EXPERIENCE

### Encando.AI

*Founding Software Engineer*

May 2025 – Present

*College Station, TX*

- Architected a scalable backend from the ground up for an AI-first Learning Management Platform, achieving support for over **5,000 active** students within 5 months by leveraging **AWS** services for high availability.
- Ensured high-quality model performance for a **multi-stage agentic RAG pipeline** by designing and implementing a rigorous evaluation framework, which improved response relevance by 20% and reduced hallucinations by 25%
- Drove improvements in development processes by **leading a team** of 5 engineers, establishing best practices for code reviews, testing, and agile methodologies to increase deployment frequency
- Achieved significant **operational efficiency** by reducing monthly infrastructure costs by 15% through strategic AWS resource optimization and cutting API costs by 35% via prompt engineering and model selection.

### Societe Generale GSC

*Software Engineer*

May 2021 - Dec 2023

*Bengaluru, India*

- Led the development of scalable data processing systems for credit risk analysis, enabling high-volume data ingestion for downstream analytics by utilizing **Big Data** technologies like **Apache Spark and Kafka**.
- Accelerated system validation cycle times by 50% and reduced quarterly compute costs by **€20,000** by building an automated regression testing suite and designing auto-scaling data pipelines.
- Built and optimized **distributed data workflows** using Java, Spring Boot, and Scala, supporting critical analytics capabilities for real-time risk management applications.

### Societe Generale GSC

*Software Engineer Intern*

May 2020 - June 2020

*Remote*

- Designed and delivered an MVP for an incident resolution system, **improving operational response times** by 38% by leveraging NLP to recommend solutions from historical data, collaborating with cross-functional teams.

## EDUCATION

### Texas A&M University

*Master of Computer Science (GPA: 4.0/4.0)*

Jan 2024 - May 2025

*College Station, TX*

- Courses: Large Language Models, Software Engineering, Deep Learning, Info Storage and Retrieval

### Indian Institute of Technology, BHU

*Bachelor of Technology - Electronics Engineering (GPA: 8.78/10.0)*

2017 - 2021

*Varanasi, India*

## PROJECTS

### PaperFormer: A Citation-Graph Enhanced Language Model for Scientific Applications.

- Achieved a 51% perplexity reduction and **State-of-the-Art** ROUGE-1 scores on the SSN dataset by co-developing a citation-aware LLM based on **LLAMA 3.2-1B** and implementing a rigorous evaluation framework using **LLM-as-a-Judge**, perplexity, and ROUGE metrics to benchmark performance.
- Reduced data processing time by 60% for a dataset of 21K papers and 1.13M citations by engineering a distributed data pipeline using Ray, enabling scalable **AI-driven review generation**.

### News Aggregation and Recommendation System

- Designed and implemented a scalable event-driven microservices architecture for a real-time news aggregation and recommendation platform, using **FastAPI**, **Kubernetes**, and **Kafka** for high availability and fault tolerance.
- Designed and implemented an automated MLOps pipeline with a model monitoring system to track drift and bias, enabling automatic retraining triggers to maintain system quality.

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, C++, SQL, TypeScript

**Frameworks:** PyTorch, Spring Boot, Apache Spark, React, Next.js, FastAPI

**Platforms:** AWS, Kubernetes, Docker, Azure, GCP, Elasticsearch

**System Design & MLOps:** System Architecture, Distributed Systems, Agile Methodologies, CI/CD

**Certifications:** Google Cloud Professional MLE , Machine learning Spec., MLOps Spec., GenAI with LLMs
